

Energy Action Month **POWER. PRESENCE.**

Reduce the use of large equipment during peak energy hours, between 1500 and 1900, when energy costs more.

Seal leaks regularly to avoid wasting water and energy.

Close bay doors when using A/C or heat.

Identify opportunities to shut down large machinery and equipment when not in use.

Don't let vehicles idle — a truck can burn approximately one gallon of diesel fuel for each hour it idles.
